

Argyle batteries

Overview

How many guns did the Argyle Battery have?

I photographed these 1810-vintage 18-pounder muzzle-loader Cannons that arm the Batteries at the Edinburgh Castle. This Battery was named in honor of the Duke of Argyll. Rebuilt in the 1730s, the Argyle Battery's six guns, plus the adjacent Mill's Mount Battery, formed the main artillery defense on the north side of the castle.

Why was the Argyle Battery built?

This Battery was named in honor of the Duke of Argyll. Rebuilt in the 1730s, the Argyle Battery's six guns, plus the adjacent Mill's Mount Battery, formed the main artillery defense on the north side of the castle. These 18-pounder muzzle-loaders are from the Napoleonic era and were built in 1810.

Who alterations the Argyle & Mills Mount batteries?

The alterations to the N fortifications (Argyle and Mills Mount Batteries) and the Western Defences were carried out on the orders of General Wade, Commander-in-Chief of His Majesty's forces in North Britain; John Romer was Board of Ordnance engineer for North Britain; William Adam was Master Mason to the Board of Ordnance.

Why are the batteries a part of the walled defences?

The batteries form part of the walled defences of the Castle, whose irregular outline, crenellations and pepperpot turrets contribute to the romantic silhouette of the ensemble. Scheduled Ancient Monument.
