Clean Energy Associates (CEA) has released its latest pricing survey for the BESS supply landscape, touching on price, products and policy.

In February, it said that the prices paid by US buyers of a 20-foot DC container from China in 2024 would fall 18% to US\$148 per kWh, down from US\$180 per kWh in 2023. That trend will reverse in the next few years, with small increases in price from 2025 onwards. Prices are expected to increase.

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices.

As of recent data, the average cost of a BESS is approximately \$400-\$600 per kWh. Here's a simple breakdown: This estimation shows that while the battery itself is a significant cost, the other components collectively add up, making the total price tag substantial. Several factors can influence the.
