

# **Average PV energy storage price per 5MW in Spain**

## Overview

---

The average price awarded in PV was 53.87 €/MWh, significantly higher than that of the two previous auctions, due to the evolution and prospects of electricity market prices and electricity futures prices.

The average price awarded in PV was 53.87 €/MWh, significantly higher than that of the two previous auctions, due to the evolution and prospects of electricity market prices and electricity futures prices.

The Transmission System Operator, Red Eléctrica de España (REE), has reported that the utility-scale PV capacity connected to the grid reached 23.804,4 MWdc in 2022, with an additional 5.612,4 MWdc of new centralized PV capacity. However, this figure only accounts for utility-scale installations.

Platts has launched an “interactive explorer” tool that shows the capture price received by wind and solar power assets, using hourly production and monthly average price data for Spain, Germany, Italy, France, and the United Kingdom. Image: Maxim Grama y Andreas Franke, S&P Global Commodity.

Renewable energy is currently experiencing substantial development in Spain. With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 percent renewable electricity mix by that year. Although wind is currently the most used renewable resource in the.

The installed capacity of photovoltaic solar energy now exceeds 32.000 MW. (25% of the national total) and continues to grow at a rate higher than the European average, according to Red Eléctrica de España. Most of this capacity corresponds to large ground-based plants, concentrated in regions such.

Spain’s household electricity prices now stand at over EUR 0.30/kWh on average. In addition, Spain’s reliance on fossil gas has increased price volatility in recent years.<sup>16,17,18,19</sup> This variability, combined with Spain’s excellent solar resources, make the economics of combining solar with.

The levelized cost of energy (LCOE) rose by €0.10/kWh (+2.5%), and the net

present value (NPV) fell by €27.10/kW (-7.7%), according to calculations by researchers from Sapienza University of Rome and the University of Jaén. Since April 1, 2024, Spain has also seen negative electricity prices. These. How much does a PV project cost in Spain?

These have occurred during 5.5% of operating hours, with an average price of -€0.4/kWh and lows of -€2.0/kWh. Over the last two years, Spain's PV market has seen a sharp drop in project prices. "It was as abrupt as it was necessary," Carmen Izquierdo, CEO of nTeaser, a European marketplace focused on M&A of renewable projects, told pv magazine.

How much does electricity cost in Spain?

Spain's household electricity prices now stand at over EUR 0.30/kWh on average. In addition, Spain's reliance on fossil gas has increased price volatility in recent years.<sup>16,17,18,19</sup> This variability, combined with Spain's excellent solar resources, make the economics of combining solar with storage increasingly favorable.

What is Spain's battery storage market?

Spain's battery storage market is dominated by customer-sited systems. Utility-scale storage remains nascent. Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average.

Does Spain have a storage market?

Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average. In addition, Spain's reliance on fossil gas has increased price volatility in recent years.<sup>16,17,18,19</sup>.

Is combining solar and storage a good idea in Spain?

This variability, combined with Spain's excellent solar resources, make the economics of combining solar with storage increasingly favorable. The market for utility-scale batteries has been almost non-existent until recently as the market has lacked a clear policy and regulatory framework.

How much solar power does Spain have?

Spain has significantly increased its share of solar power since 2020, with total

capacity rising from approximately 11.74 GW to about 34 GW. The first curtailment events for solar power occurred in April 2022.
