

# Average cost of solar panels and battery

## Overview

---

How much do solar panels cost?

Here's a breakdown of residential and commercial solar panel prices. Residential solar panel prices typically range from \$15,000 to \$30,000 before any applicable tax credits or incentives. Costs depend on several factors:  
System Size: Larger systems usually have higher upfront costs but can lead to more significant energy savings.

How much does a solar battery cost?

Historically, solar batteries have had a reputation for being prohibitively expensive, with many recorded instances where adding storage doubled the cost of a home solar installation. You can expect to pay between \$7,000 and \$18,000 for a solar battery.

How much does a solar battery storage system cost?

The cost of a solar battery storage system for your home can range from as low as \$300 to more than \$20,000, depending on the size of your home, quality of the storage system, and energy consumption. Most systems typically cost around \$10,000 on average.

How much does a solar battery backup cost?

Two cabinets can connect to a single inverter for up to 36 kWh total backup power. Whole-house solar battery backup costs \$20,000 to \$32,000 installed, not including solar panels. The average home uses 28 to 30 kWh per day, requiring batteries with at least that total capacity or more to power the entire home for one day.

How much does a solar system cost per watt?

As of publishing, the average cost per watt is \$2.84. Most solar companies set the price according to the solar system's wattage. A solar installation's "cost per watt" is a little like the "price per square foot" when you buy a house. It

helps compare the value of solar energy systems in different sizes.

Are solar batteries worth it?

Solar batteries typically cost \$10,877 after the federal tax credit—which expires for batteries installed after December 31, 2025—for the 13.5 kilowatt-hours (kWh) of storage a typical home needs to keep essential devices running during outages (also the size of a Tesla Powerwall 3). Whether they're worth it depends entirely on your situation.
