

# **Average hybrid renewable storage price per 100MW in Slovakia**

## Overview

---

This Outlook analyses the five key renewable electricity sources, namely solar PV, onshore wind, hydropower, bioenergy, and geothermal, along with, for the first time, battery energy storage systems (BESS).

This Outlook analyses the five key renewable electricity sources, namely solar PV, onshore wind, hydropower, bioenergy, and geothermal, along with, for the first time, battery energy storage systems (BESS).

This Outlook analyses the five key renewable electricity sources, namely solar PV, onshore wind, hydropower, bioenergy, and geothermal, along with, for the first time, battery energy storage systems (BESS). Each chapter assesses past and current deployment, barriers, policy frameworks, and three.

By 2030, Slovakia expects a significant increase in renewable energy consumption, amounting to approximately 1,972 ktoe (or 22.9 TWh). The country's strategy includes a diverse mix of renewable energy sources with allocated installed capacities by 2030 as follows: Hydro power (1,755 MW).

The Slovakia renewable energy market refers to the sector within Slovakia's energy industry that focuses on the production and utilization of renewable sources of energy. Renewable energy sources include solar power, wind power, hydroelectricity, biomass, and geothermal energy. This market is.

The Slovak Renewable Electricity Market Report 2022 maps out the current state of renewable energy sources used for electricity generation (RES-E) in Slovakia and introduces a set of projections on future development scenarios by 2030, 2050 respectively. It is centred around five types of RES-E.

In an auction in May 2024, guarantees were traded in the amount of 116GWh from solar and water sources, with an average price of €1.3/MWh. However, Slovakia is still dependent on Russian gas and could potentially face significant energy security and economic challenges due to uncertainties in gas.

The Slovakia Energy Storage Systems Market is experiencing growth driven by

increasing renewable energy integration, grid modernization efforts, and the need for reliable power supply. The market is witnessing a shift towards lithium-ion batteries due to their declining costs and higher energy. Should SHPPs be integrated into Slovakia's energy mix?

The integration of SHPPs into Slovakia's energy mix could be a strategic move towards enhancing the country's energy landscape, offering a sustainable and efficient method to increase renewable energy production while contributing to local development and environmental conservation.

Is geothermal energy used in electricity production in Slovakia?

At the end of 2022, geothermal energy is not used in electricity production, but only to a limited degree for heat production and recreational use. This makes it the only RES-E technology in Slovakia without any installed capacity. Slovakia's overall (probable) geothermal potential is calculated at around 6,200 MWt.

Does Slovakia have a hydropower plant?

Over the last decade, Slovakia witnessed a gradual increase in the installed capacity of hydropower plants - mainly ones falling into the category of small hydropower plants (SHPPs) with lower installed capacity of up to 10 MW and micro-ones of up to 100 kW. The total capacity of hydropower peaked at 2,574 MW in 2021.

How much hydropower will Slovakia have in 2050?

In line with the 2050 Pathways Explorer model, Slovakia should aim for the installed capacity of hydropower of at least 2,671 MW. Nevertheless, the vast majority of projected development is expected to take place after 2030, with an overall increase of 95 MW until 2050.

How much solar PV will Slovakia need in 2050?

As shown in the zero-emission scenario, Slovakia will need to implement at least 7,500 MW of solar PV installed in 2050 if it aims to reach its carbon-neutrality. This target - as well as the 2030 milestone target - is more than double of that set in the NECP.

How much bioenergy will Slovakia have in 2050?

Until then, Slovakia should have 400 MW of installed bioenergy capacity,

evenly divided between solid biomass and biogas. According to the NECP, this milestone should be reached by 2027 already. Considering this, the projected installed capacity in 2050 would, according to our methodology, remain at 400 MW.

## Average hybrid renewable storage price per 100MW in Slovakia
