The Sultanate's 3,500+ annual sunshine hours make photovoltaic energy storage devices the hottest topic since air-conditioned falaj irrigation. But let's face it: how much does this green energy solution actually cost in Muscat?

Let's break down the numbers like Omani halwa - layer by layer. 1.

Oman benefits from an abundant solar resource, with annual sunshine hours ranging from 2,900 to 3,600 hours, and solar radiation levels of 8.2 to 9.6 kilowatt-hours per square meter per day. 1 The annual generation per unit of installed PV capacity in Oman is approximately 1900-2000 KWh/kWp/year. 2.

In areas where an electricity grid is available but the access is prohibitively expensive and have to generate own electricity (e.g. for reducing the use of electricity from the electricity grid, generating clean electricity or backup power).

MUSCAT: A new solar PV based Independent Power Project (IPP), set to come up at Ibri in Al Dhahirah Governorate, is expected to be integrated with utility-scale battery storage in a first for Oman's rapidly expanding renewable energy sector. Battery storage allows solar power plants to store excess.
