

# Average mobile ESS unit price per 200MW in Philippines

## Overview

---

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices Are there opportunities in the Philippines for US energy storage systems?

There are opportunities in The Philippines for U.S. suppliers of energy storage systems. The Philippine Government continues to state its goal to be energy self sufficient as mounting energy challenges loom. The Department of Energy (DOE) is looking into utilizing renewable energy, and modernizing and deploying an efficient grid system.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

Does ESS integrate with international electricity markets?

This section benchmarks WESM practices against international electricity markets where ESS integration has occurred. The section focuses on services that ESS provides – providing an assessment of ancillary services, capacity markets and energy markets.

Is ESS compatible with Stage 3 requirements for the Philippines WESM?

In the case of the Philippines WESM, while it is recognized that there is a growing need to allow for the integration of hybrid facilities (or Integrated Energy Resources), it is necessary to ensure that the implementation of the standalone ESS installations in the WESM is consistent with the requirements of Stage 3.

What is energy storage system (ESS)?

Energy Storage Systems (ESS) can be applied centrally, serving more than one RE power plant, or can be distributed at each RE power plant.

Should ESS impose a market price cap and market price floor?

Right for System Operator to issue cease charging order (from Stage 1 of project). The recommendation is to impose a market price cap and market price floor formally on the market prices. This is to create certainty for ESS operating in the market where an unfloored market price floor could be an unacceptable risk.
