

# **Average mobile ESS unit price per 300MW in Netherlands**

## Overview

---

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

What are the laws & regulations on energy storage in the Netherlands?

No specific laws & regulations: In the Netherlands, energy storage is not described in Dutch laws and regulations as a specific item. Standard requirements: It has to meet standard requirements for production and consumption and some specific technologies that are part of the energy storage system must comply with standardisation.

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.

## Average mobile ESS unit price per 300MW in Netherlands
