

# **Average nickel manganese cobalt battery price per 50MW in New Zealand**

## Overview

---

Despite weakness in natural and synthetic graphite, lithium and manganese, nickel's rise and the surge in cobalt prices saw the total battery metals bill move higher for the first time this year, hitting \$506 in March, the latest month where detailed data is available.

Despite weakness in natural and synthetic graphite, lithium and manganese, nickel's rise and the surge in cobalt prices saw the total battery metals bill move higher for the first time this year, hitting \$506 in March, the latest month where detailed data is available.

The raw material bill for the contained lithium, graphite, nickel, cobalt and manganese in the batteries of EV sold during the first four months of year climbed to over \$4 billion, even as prices for lithium hydroxide and carbonate continue to set new lows. Chinese LCE prices averaged below \$10,000.

Battery raw material prices, news and market analysis. Get the latest on lithium, cobalt, nickel and more from our team of battery raw materials experts.

The latest data based on EV registrations in over 110 countries show the sales weighted average monthly dollar value of the lithium, nickel, cobalt, manganese and graphite contained in the batteries of the average EV based on global end-user registrations, battery capacity and chemistries. Put it.

September 8 (SMM) - The SM2601 contract opened at 5,806 yuan/mt and closed at 5,840 yuan/mt, up 0.41%, with the highest price at 5,860 yuan/mt and the lowest at 5,768 yuan/mt. Trading volume reached 138,580 lots, while open interest stood at 322,510 lots. The futures market performed well today.

The raw material bill for the contained lithium, graphite, nickel, cobalt and manganese in the batteries of EV sold during the first four months of year climbed to over \$4 billion, even as prices for lithium hydroxide and carbonate continue to set new lows. Chinese LCE prices averaged below \$10,000.

Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average

price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions, increasing the battery's energy. How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

How much does LME nickel cost?

The latest quote for LME nickel was \$15,150/mt, with a weekly gain of 0.87%. In the spot market, the average price of SMM #1 refined nickel this week was 121,870 yuan/mt, up 1,300 yuan/mt week-on-week.

Why did NCM battery cell prices drop in May?

Asian nickel cobalt manganese (NCM) battery cell prices fell to their lowest level for the first time in over three years in May, retreating significantly from the peak seen in 2022. A combination of lower critical battery raw material prices, supply glut, a sluggish demand and improving technology has kept a tight lid on NCM [ . ].

What is the price of SMM nickel in China?

In the spot market, the average price of SMM #1 refined nickel this week was 121,870 yuan/mt, up 1,300 yuan/mt week-on-week. The premium for Jinchuan nickel remained stable at 2,100-2,400 yuan/mt, while the premium range for mainstream electrodeposited nickel in China remained stable at -100-300 yuan/mt this week.

Why are cobalt prices consolidated?

In the weeks following confirmation that the cobalt market will face an additional three months of no exports from the Democratic Republic of Congo (DRC), metal prices have consolidated as participants point to the future for bullish sentiment.
