

# **Average nickel manganese cobalt battery price per 50MW in Spain**

## Overview

---

Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024.

Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024.

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024. This article focuses primarily on two of the.

Figure 1 presents the estimated cost for nickel manganese cobalt (NCM) 811 cells for a 10 gigawatt-hour per year production rate across four different countries. Figure 1 In the first quarter of 2023, NCM 811 cell costs in China were estimated to be 101 dollars per kilowatt hour (kWh) and 110.

The raw material bill for the contained lithium, graphite, nickel, cobalt and manganese in the batteries of EV sold during the first four months of year climbed to over \$4 billion, even as prices for lithium hydroxide and carbonate continue to set new lows. Chinese LCE prices averaged below \$10,000.

Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions, increasing the battery's energy.

Battery raw material prices, news and market analysis. Get the latest on lithium, cobalt, nickel and more from our team of battery raw materials experts.

The latest data based on EV registrations in over 110 countries show the sales

weighted average monthly dollar value of the lithium, nickel, cobalt, manganese and graphite contained in the batteries of the average EV based on global end-user registrations, battery capacity and chemistries. Put it. How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

Why are cobalt prices consolidated?

In the weeks following confirmation that the cobalt market will face an additional three months of no exports from the Democratic Republic of Congo (DRC), metal prices have consolidated as participants point to the future for bullish sentiment.

Are NCM batteries a good choice for EVs?

This cost advantage makes them a favorable choice for standard- or short-range EVs. In the rapidly evolving EV battery market, specific compositions have taken center stage. In 2021, NCM batteries commanded 58% of the market share, closely followed by LFP and NCA, each holding a 21% share.
