

# **Average on grid solar storage price per 1GW in Philippines**

## Overview

---

How much do solar panels cost in the Philippines?

Prices can fluctuate based on these trends. For example, the recent decrease in the cost of solar panel production has contributed to lower consumer prices. As of recent data, solar panel prices in the Philippines typically range from PHP 30,000 to PHP 60,000 per kilowatt (kW). This cost includes panels, inverters, and installation.

How much will solar panels cost in the Philippines in 2025?

The price of solar panels has seen a significant reduction over the last decade, and this trend is expected to continue in 2025. The cost of solar panels in the Philippines is anticipated to fall to approximately ₱30,000 to ₱40,000 per kW for residential installations.

Are solar panels a good investment in the Philippines?

Absolutely. With the right system, our clients experience 30% to 70% savings on their electricity bills — some even reach a zero bill. Payback period for a solar system in the Philippines is typically between 3 to 5 years. After that, the savings go straight to your pocket.

How much does a solar system cost?

The price of solar has been steadily going down over the last 20 years as technology has been improving and manufacturing techniques have become more efficient, the average price is now Php 50,000 per kWp or lower in some cases for entire installed solar power systems. As many as you can fit on your roof!.

Will solar-plus-storage projects be included in Geap?

The Energy Regulatory Commission (ERC) has released draft reserve prices for the fourth round of the Green Energy Auction Program (GEAP), marking the first time that solar-plus-storage projects will be included.

How does the size of a solar system affect the cost?

The size of the solar system, measured in kilowatts (kW), impacts the overall cost. Larger systems generate more power and require a higher upfront investment. The system size should be based on the energy needs and available space.
