

# **Average residential solar battery price per 20MW in Chile**

## Overview

---

The Atacama Desert boasts one of the highest solar irradiation levels on Earth, averaging 2,500 kWh/m<sup>2</sup> per year. The region's photovoltaic (PV) effective utilization hours are approximately 42% above the global average, making it ideal for high-efficiency, large-scale solar energy projects.

The region's photovoltaic (PV) effective utilization hours are approximately 42% above the global average, making it ideal for high-efficiency, large-scale solar energy projects.

The current Levelized Cost of Energy (LCOE) for a "PV + 4-hour storage" system has dropped to \$0.32/kWh—58% lower than traditional diesel generation. However, due to grid transmission constraints, over 50% of solar generation in the north is being curtailed. Studies suggest that increasing the.

Under current market conditions, residential solar is not economically viable in Chile. Through financial modeling, we analyzed potential paths toward viability through four different drivers that would reduce payback period and increase IRR. Through financial modeling, we analyzed the impact of.

In 2017, the installation of photovoltaic (PV) panels of between 1 kWp and 5 kWp in Chile cost an average of US\$2,326 per kWp; today, that same infrastructure costs around US\$1,639 per kWp, a drop of 29.5%. The decrease varies depending on the scale of the project and, in the case of a project of.
