Over the past three years, Finland's energy storage market has grown faster than a Helsinki startup - jumping from €180 million in 2021 to an estimated €320 million in 2024. But here's the kicker: module prices dropped 12% during the same period. How's that possible?

Let's unpack this paradox.

Especially the solid state batteries, are also expected to be advances further and used as a new material such as sodium ion which is expected to be low in

price and high in performance. The Storage Development baselines will make cost effective improvement bringing about benefits to the energy.
