

Average utility scale ESS price per 30kWh in Germany

Overview

In Germany, residential ESS installations now cost \$800-\$1,200/kWh – 34% cheaper than 2020 prices. Understanding energy storage system costs requires analyzing three pillars: China's CATL recently achieved \$97/kWh for LFP battery packs – a game-changer for commercial ESS pricing. What are the use cases for large-scale energy storage systems in Germany?

The use cases for large-scale storage systems in Germany are beginning to shift. Ancillary services still remain the main application, with around 658MW/750MWh of energy storage built for this purpose to date.

Why do we need energy storage systems in Germany?

Increasing the share of renewables poses new challenges: Excess energy produced during off-peak hours needs to be stored and made available when needed. Since energy storage systems (ESS) can balance supply and demand, they are an essential part of Germany's energy transition. In line with this, the market for ESS is constantly growing.

How much does Germany spend on EV and stationary battery research?

Public research and development incentives for EV and stationary battery research amount to between EUR 80 million and EUR 85 million every year. As the European lead market in the energy transition age, Germany provides the opportunity for companies to develop, test, define and market new energy storage solutions.

Will Germany's energy storage system double in 2022?

Germany's installed base of large-scale energy storage predicted to roughly double in the next couple of years, after 2022 saw a comeback.

How is energy storage funded in Berlin?

Investments in electricity storage in connection with newly installed photovoltaic systems are also being funded in Berlin through the

“EnergiespeicherPLUS” program. If you meet all the initiative’s requirements, 300 euros per kWh of storage capacity can be funded – up to 15,000 euros.

How much can a kWh of storage capacity be funded?

If you meet all the initiative’s requirements, 300 euros per kWh of storage capacity can be funded – up to 15,000 euros. Funds have been used up in the meantime, so no further applications can be submitted, but in the case of new funding being made available another cycle is planned (more information [here](#)).
