

Average utility scale ESS price per 500MW in Argentina

Overview

How much is a battery energy storage system (BESS) project worth?

The Energy Secretariat of Argentina's Ministry of Economy has launched a global tender for 500 MW of battery energy storage system (BESS) projects in the Metropolitan Area of Buenos Aires' (AMBA) critical nodes. The project's estimated value is \$500 million, with an execution period of 12 to 18 months.

How many MW of battery energy storage will be deployed in Buenos Aires?

The initiative aims to deploy 500 MW of battery energy storage systems (BESS) in the Greater Buenos Aires Area (GBA), but the submitted capacity has far exceeded expectations—reaching a combined 1,347 MW.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

Why is energy storage important in Argentina?

The implementation of storage solutions aims to prevent power outages, improve system efficiency, and ensure a stable electricity supply during high-demand periods. This initiative marks Argentina's first large-scale adoption of energy storage technology.

Who will sign the energy storage contracts in Buenos Aires?

The energy storage contracts will be signed with leading electricity distributors in Buenos Aires, Edenor, and Edesur, while the Wholesale Electricity Market Administration Company (CMMESA) will be the guarantor.

How much will Buenos Aires invest in storage capacity?

The Argentinean authorities plan to install the new storage capacity in critical nodes of the metropolitan area of Buenos Aires, with an estimated investment of \$500 million and an execution period of between 12 and 18 months. From pv magazine Latam
