

# **Average wind solar storage price per 800MW in Brazil**

## Overview

---

The work aims to verify the economic feasibility of renewable hybrid systems for hydrogen production and storage in the Brazilian electric power sector. The methodology applied is based on economic cost analyses of the two largest wind and solar photovoltaic plants in the country.

The work aims to verify the economic feasibility of renewable hybrid systems for hydrogen production and storage in the Brazilian electric power sector. The methodology applied is based on economic cost analyses of the two largest wind and solar photovoltaic plants in the country.

The auction, to take place in June 2025, will include 300MW energy capacity purchase that could drive an estimated \$450m in investments from winning bidders, according to consultants Oliver Wyman. Combine business intelligence and editorial excellence to reach engaged professionals across 36.

The highest maximum bidding price is BRL 315 (USD 62.8/EUR 59.4) per MWh. Overall, 75,250 MW have registered with Brazil's state-owned energy research firm EPE to take part in the bidding process. Of this, 73,256 MW is wind and solar. For projects without a contract, the initial price will be BRL.

The Brazil Renewable Energy Market size is estimated at 235.62 gigawatt in 2025, and is expected to reach 321.31 gigawatt by 2030, at a (CAGR) of 6.4%. This expansion is fueled by investments in wind and solar energy, supported by favorable government policies and a commitment to diversifying the.

The average selling price was BRL237.48/MWh (US\$45.5/MWh) and solar accounted for the most capacity (200 MW). The start of supply is scheduled for 1 January 2027 and power purchase agreements (PPAs) for wind and solar have a 15-year term. The projects will require an investment of around BRL2.9bn.

Energy storage systems (ESS) are critical for balancing energy supply and demand, enhancing grid stability, and enabling the integration of renewable energy sources such as solar and wind. These systems cater to residential,

commercial, and industrial applications, as well as utility-scale.

For the first time, wind and solar power generated over one-third (34%) of Brazil's electricity in August, producing a record 19 terawatt-hours (TWh). Hydropower's contribution fell to 48%, marking only the second occurrence it provided less than half of Brazil's electricity, spurring the growth of. How much does a solar project cost in Brazil?

Overall, 75,250 MW have registered with Brazil's state-owned energy research firm EPE to take part in the bidding process. Of this, 73,256 MW is wind and solar. For projects without a contract, the initial price will be BRL 315 per MWh for hydro and biomass-fired, and BRL 225 per MWh for solar and wind.

How big are Brazilian wind energy projects?

The Brazilian wind energy generation projects have not been happening in a wide range of sizes, as could be seen in this sample, which covers almost all the projects that have succeeded at the auctions. Other sources of energy have a much wider range of sizes, giving more room for scale gains.

Are solar and wind power plants viable in Brazil?

First, the capacity factor of the wind power plants, on average, become superior than the capacity factor of the solar power plants in Brazil. The model concludes that the solar and wind hybrid system for hydrogen production and storage is not yet viable in Brazil.

How has the wind power industry changed in Brazil?

The wind power industry has been evolving around the world and also in Brazil, where 761 projects, between 2009 and 2020, were successful at electric energy auctions promoted by the Brazilian Chamber of Electric Energy Commercialization (CCEE).

Are solar and wind hybrid systems viable in Brazil?

The model concludes that the solar and wind hybrid system for hydrogen production and storage is not yet viable in Brazil. In addition, the CAPEX of electrolysers and storage tanks and their operating losses are key points for the deployment of these systems.

How much does a 4 MW project cost in Brazil?

Dubbed A-4, the auction will contract hydro, wind, solar and biomass-based thermal power projects. The highest maximum bidding price is BRL 315 (USD 62.8/EUR 59.4) per MWh. Overall, 75,250 MW have registered with Brazil's state-owned energy research firm EPE to take part in the bidding process. Of this, 73,256 MW is wind and solar.

## Average wind solar storage price per 800MW in Brazil
