

Batteries for solar reddit

Overview

What is a solar battery & how does it work?

They store excess electricity generated by solar panels during the day for use at night or when there is no sunlight. During an outage, the energy stored in the battery can power the entire house or selected critical loads, depending on the capacity of the battery system.

Why is my solar battery not working?

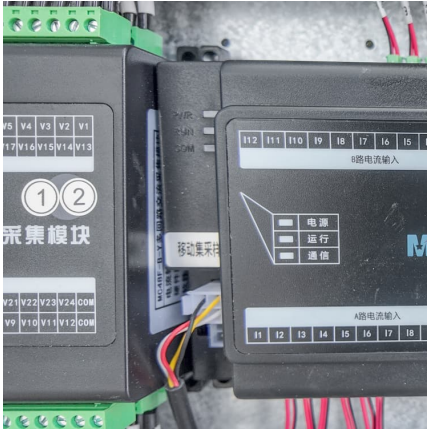

There are several reasons for batteries. You have poor netmetering in your area - this would allow you to use solar during the day and recharge the battery and use the battery in the evening. Power during an outage. -- Without a battery or a very few other options your solar will also shutdown.

Would solar power save money if we didn't have batteries?

Without batteries you'd be running hot water during the day when Solar should cover it so only paying your feed-in. With banks offering 5%+ interest on savings, the interest alone on what the batteries would cost would come close to covering electricity consumption on better priced plans. People would save more than \$400 a year.
