

# Beats solo 3 battery drain when off

## Overview

---

Another fix for battery drain issue on your headphone is to disable or turn off Bluetooth settings. When Bluetooth is turned off (when not in use) it saves and conserves battery life since it will not connect to another Bluetooth device. Make sure to clean Beats headphones and its case. Why are my beats solo3 wireless headphones draining so fast?

Your Beats Solo3 Wireless should provide you with 40 hours of music playback when charged properly. The headphones draining so fast may be due to several reasons, which stem from the battery. For reference, the batteries powering the Apple headset are of the lithium polymer variety.

Why is my beats solo3 battery draining so fast?

If you're blasting the headphones at full volume every second you use, you'll likely see a dip in battery performance. The same can be said for being too far away from your device. If your phone and the Beats Solo3 are struggling to stay paired over Bluetooth, you'll likely burn through the battery power a little faster.

How long does a Beats Solo 3 battery last?

Thanks to a battery life of 40 hours, Beats Solo 3 Wireless is your perfect everyday reliable headphone. With Fast Fuel, a 5-minute charge gives you 3 hours of playback. Have a great sound and voice experience with on-ear controls and beam-forming mics for some quality wireless listening freedom.

Why is my beats solo3 not working?

If your phone and the Beats Solo3 are struggling to stay paired over Bluetooth, you'll likely burn through the battery power a little faster. Your settings, environment, and usage will all affect how many hours of listening time you will see. One more thing that can severely impact battery life is temperature.

Can you leave beats solo3 wireless plugged in overnight?

Leaving the Beats Solo3 Wireless plugged in overnight is no big deal. The Apple-owned headphones are smart enough to cease charging once the full battery is reached. As such, you don't have to worry about overcharging or damaging your device when left for a few hours.

Are beats solo3 batteries rechargeable?

Batteries of this kind may be rechargeable, but they also have a limited lifespan. Generally, they can last between 300 to 500 charge cycles, meaning you consume them every time you charge your Beats Solo3. If your headphones are draining at a quicker pace, then they may be approaching the end of their lifespan.

## Beats solo 3 battery drain when off
