

Birksun elevate solar battery charger backpack

Overview

How fast does a birksun Solar backpack charge?

Birksun solar backpacks can charge your devices with a speed that is equal to that of the wall chargers. A Birksun backpack can deliver power equal to 1% of the mobile battery when exposed to the sun for 2 minutes. The backpack can fully charge a device within 2 hours with its in-built lithium battery of 3000 mAH capacity.

How much power does a birksun backpack provide?

A Birksun backpack can deliver power equal to 1% of the mobile battery when exposed to the sun for 2 minutes. The backpack can fully charge a device within 2 hours with its in-built lithium battery of 3000 mAH capacity. You can charge your gadget simultaneously while the bag still gets powered by the sun.

How much does a birksun boost backpack weigh?

The Birksun Boost Backpack may look like an ordinary backpack at first glance. It is far from ordinary. The backpack, which weighs 2.3 pounds, has a built-in USB outlet where you can charge smartphones and other USB devices. The backpack has a 15" fleece laptop sleeve, organizational front pocket, and a neoprene organizer sleeve.

Are birksun solar backpacks good?

Since 2013, Birksun has remained to be a top brand selling solar backpacks. The solar backpacks function precisely the same way as any other charger. In this Birksun Solar Backpack review, we will explore the different specifications and compare different solar backpacks to help choose the best.

What are birksun solar panels?

Birksun solar panels have modern Nano-crystalline technology, which has a higher absorption capacity. They have thinner films which integrate well with

the bag's fabric. Also, the solar panels are scratch proof, and the bags are highly durable. These panels collect energy from the sun and preserve it for long.
