Can EV power a home?

This means you can charge your car like normal, but the energy flow can also be reversed (VTG), enabling the stored energy in the EV's battery to be fed back into the grid or used to power a home (VTH). For this reason, this

technology has the potential to play a crucial role in balancing the supply and demand of energy.

Can a solar EV be used as a home energy asset?

Combining solar panels with a bidirectional EV and a smart 2-way charger transforms your electric car into a powerful home energy asset. Instead of relying solely on traditional batteries or feeding excess solar energy back to the grid at low compensation rates, your EV becomes a dynamic storage unit.
