

Capacitor energy storage stud machine

Overview

Capacitive energy storage in stud welding refers to the use of capacitors to store electrical energy, which is then rapidly discharged to weld a stud to a workpiece. This method is highly efficient, producing strong welds with minimal heat-affected zones (HAZ).

Building on the inherent advantages of a capacitor-discharge stud welder, this variant incorporates a robust automatic feed mechanism to boost overall throughput and eliminate interruptions caused by manual loading. The feed channel is highly integrated with the welding gun body, ensuring.

Energy-storage type stud welding machine can weld stud, threaded stud, dowel to metal workpiece. During the welding process, through element point discharge energy storage capacitor discharge, discharge time, 0.001 to 0.003 seconds. Don't need gas or ceramic ring protection, penetration is about.

Advanced design, powerful functionality, small size, light weight, and easy to operate. Due to the high power of the charging transformer and fast charging recovery, up to 40 energy storage studs can be welded per minute. ●

RSR-2500 Capacitor energy storage stud welding machine, bolt label welding machine, thermal insulation nail type welding machine. Capacitor capacity: 72,000 uF. Welding energy: 1600J/W/S. Welding materials: low-carbon steel, stainless steel, aluminum, brass.

1.Cantilever structure design for lightweight control and high welding precision. 2.Equipped with a screw lift mechanism for high stability, suitable for various complex factory environments. The 1200×800mm worktable accommodates most small to medium-sized workpieces, allowing easy movement to any.
