

# **China s network energy storage subsidy policy**

## Overview

---

Subsidy policies for energy storage technologies are adjusted according to changes in market competition, technological progress, and other factors; thus, energy storage subsidy policies are uncertain.

Subsidy policies for energy storage technologies are adjusted according to changes in market competition, technological progress, and other factors; thus, energy storage subsidy policies are uncertain.

China is emerging as an energy storage powerhouse. China's installed power generation capacity surged 14.5 percent year-on-year to 2.99 billion kW by the end of March, with that of solar power soaring 55 percent year-on-year to 660 million kW and wind power rising 21.5 percent year-on-year to 1.03 billion kW.

In just four months into 2025, the energy storage sector has experienced a series of significant policy updates. The combined effects of Document 136 and Document 394 essentially aim to eliminate excesses in the energy storage industry, marking a critical transition from policy-driven growth to market-driven growth.

Announced by the National Development and Reform Commission (NDRC) and the National Energy Administration (NEA), the new plan is expected to drive CNY 250 billion (\$35.1 billion) in sector investment. From ESS News China aims to install more than 100 GW of new energy storage – primarily battery.

## China s network energy storage subsidy policy
