

Commercial solar battery installation nottingham

Overview

Is a solar battery worth installing in the UK?

A solar battery can be well worth installing in the UK, but its value depends on factors like electricity costs, solar generation, and available incentives. Since the UK has higher electricity prices and frequent cloudy days, storing excess solar energy for use during peak hours or at night can greatly increase savings.

What is a solar battery?

A solar battery is a device that stores excess electricity generated by solar panels for later use, especially at night or during power outages. It allows homeowners to maximize solar energy usage and reduce reliance on the grid. Common types include lithium-ion and lead-acid batteries.

How do I contact a solar energy manager?

Speak to our friendly and knowledgeable team on: 0115 783 6409 to arrange a survey or use our contact form. With the inclusion of battery storage alongside your PV solar panels, our energy manager device will give real time reporting of household power consumption as well as yield from your solar panels.

Why do I need battery storage with my PV solar panels?

With the inclusion of battery storage alongside your PV solar panels, our energy manager device will give real time reporting of household power consumption as well as yield from your solar panels. This will help you to make adjustments to the way you use electricity. Get in touch with our friendly and knowledgeable team.

Are solar panels the cheapest way of supplying electricity to a building?

It's now even more apparent that solar panels are the cheapest way of supplying electricity to a building and that electricity generation is exactly

where you need it - if coupled with battery storage it's also likely to be when you need it, according to your daily routines. Get in touch.
