Overview

The global market for compressed air energy storage was reached USD 1.6 billion in 2024 and is projected to grow at a 7.6% CAGR from 2025 to 2034, driven by the expansion of renewable energy sources like solar and wind. Is compressed air energy storage a feasible energy storage solution?

Underlines CAES's importance as a feasible energy storage solution for RES. Compressed air energy storage (CAES) is a large-scale energy storage system with long-term capacity for utility applications. This study evaluates different business models' economic feasibility of CAES pre-selected reservoir case studies.

Is compressed air energy storage data confidential?

The data that has been used is confidential. Succar S, Williams R. Compressed air energy storage : theory, resources, and applications for wind power. Princeton University; 2008.

What is compressed air energy storage (CAES)?

As the world transitions to decarbonized energy systems, emerging long-duration energy storage technologies are crucial for supporting the large-scale deployment of renewable energy sources. Compressed air energy storage (CAES) is a promising solution for large-scale, long-duration energy storage with competitive economics.

Is CAES Res a viable business model for large-scale energy storage projects?

Although used in this case for evaluating CAES projects in mainland Portugal, this methodology can be used anywhere to determine the economic feasibility of CAES or other large-scale energy storage projects. The results obtained pointed out a better financial performance from the CAES RES business model than the CAES arbitrage business model.

What are energy storage technologies?

Energy storage technologies play a crucial role in the modern energy landscape, offering a wide array of benefits across various applications. The integration of energy storage systems has been rec.

Is AA-CAES a good business model for Energy Arbitrage?

However, one of the best economic feasibility results of both business models is shown in scenario 3, which corresponds to an AA-CAES technology using a pre-existing salt cavern from the Monte Real / Carriço case study. The results of this third scenario make it suitable for RES storage business models and energy arbitrage business models.
