

# **Cost of electricity per kilowatt-hour for industrial and commercial energy storage**

## Overview

---

Within the ATB Data spreadsheet, costs are separated into energy and power cost estimates, which allows capital costs to be constructed for durations other than 4 hours according to the following equation:.

Within the ATB Data spreadsheet, costs are separated into energy and power cost estimates, which allows capital costs to be constructed for durations other than 4 hours according to the following equation:.

The 2023 ATB represents cost and performance for battery storage across a range of durations (1–8 hours). It represents only lithium-ion batteries (LIBs) - those with nickel manganese cobalt (NMC) and lithium iron phosphate (LFP) chemistries - at this time, with LFP becoming the primary chemistry.

Utilities and energy service providers may classify commercial and industrial customers based on either NAICS codes or demands or usage falling within specified limits by rate schedule. Changes from year to year in consumer counts, sales and revenues, particularly involving the commercial and.

As of recent data, the average cost of commercial & industrial battery energy storage systems can range from \$400 to \$750 per kWh. Here's a breakdown based on technology: It's important to note that these prices can fluctuate based on market conditions, technological advancements, and specific.

In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region.

Industrial consumers of electricity in the United States paid an average of 8.15 U.S. dollar cents per kilowatt-hour in 2024. This was an increase compared to the previous year, when prices peaked at 8.3 U.S. dollar cents per kilowatt-hour. Prices are forecast to increase further to 8.32 U.S.

In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System

(BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects. For. How much does a commercial battery energy storage system cost?

Average Installed Cost per kWh in 2025 In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

How much does electricity cost per kilowatt-hour?

Industrial consumers of electricity in the United States paid an average of 8.15 U.S. dollar cents per kilowatt-hour in 2024. This was an increase compared to the previous year, when prices peaked at 8.3 U.S. dollar cents per kilowatt-hour. Prices are forecast to increase further to 8.32 U.S. dollar cents per kilowatt-hour by the end of 2025.

How much does energy storage cost?

Let's analyze the numbers, the factors influencing them, and why now is the best time to invest in energy storage. \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region depending on economic levels. For large containerized systems (e.g., 100 kWh or more), the cost can drop to \$180 - \$300 per kWh.

How much does a 100 kWh battery cost?

A standard 100 kWh system can cost between \$25,000 and \$50,000, depending on the components and complexity. What are the costs of commercial battery storage?

Battery pack - typically LFP (Lithium Uranium Phosphate), GSL Energy utilizes new A-grade cells.

How are electricity prices calculated?

The prices are calculated using 1,000,000 kWh annual consumption and are expressed in USD using the current exchange rates. The map shows the price of electricity for industrial use per kWh. The data on the map are for 132 countries and were collected in 2024 Q4. The latest data and historical series are available for download.

How much does a 100 kWh solar system cost?

For example, in 2022, a 100 kWh system could cost \$45,000. By 2025, similar systems could sell for less than \$30,000, depending on configuration. Why invest now?

## Cost of electricity per kilowatt-hour for industrial and commercial e

---

### Price to Compare

A. Electric Supply The electric supply charge is the price you pay per kilowatt-hour ("kWh") for the electricity you use in your home. The price of electric supply is determined ...

### Business Rates and Tariffs

Small Business Customers on our Small Business rates use less than 30 kW of energy and typically are mom-and-pop grocery stores or restaurants, gas stations, small churches, ...
