

# **Cost of solar power per kwh in michigan**

## Overview

---

As of August 2025, the average solar panel system costs \$3.10/W including installation in Michigan. For a 5 kW installation, this comes out to about \$15,501 before incentives, though prices range from \$13,176 to \$17,826.

As of August 2025, the average solar panel system costs \$3.10/W including installation in Michigan. For a 5 kW installation, this comes out to about \$15,501 before incentives, though prices range from \$13,176 to \$17,826.

You'll pay an average of \$15,501 to install a 5 kilowatt solar panel system in Michigan, before incentives. Act now: The federal investment tax credit (ITC) lowers the total cost of installing solar by 30%, but only until December 31, 2025 —after that, it's gone. Why trust EnergySage?

As subject.

Before considering any incentives, average solar panel installation costs range from \$15,501 to \$31,002 in Michigan. How much you actually pay depends on the size of your system, whether or not you want a solar storage battery and other factors. Based on feedback from thousands of solar customers.

The price of solar panels in Michigan depends largely on the size of the system you need. Panels are priced based on a per-watt basis, with Michigan residents paying around \$3.62 per watt. This is well above the national average of \$3.33 per watt. That means you'll pay an average of \$3,200 more in.

You'll spend an average of \$13,755 on a 5 kW system in Michigan, after tax incentives. For Michigan, you can use \$3.94 per watt to determine the price of a larger system (system size x price per watt x 0.7 to account for tax incentives). High Power Bills?

Reduce or replace your electricity bill.

As of 2025, the average cost of solar panels in Michigan is \$3.34 per watt, making a typical 7.2 kilowatt (kW) solar system \$16,834 after claiming the

30% federal solar tax credit now available. This is higher than the average price of residential solar power systems across the United States, which.

With electricity rates at 19.29 cents per kWh and prices rising 19% since 2020, homeowners are turning to solar for reliable savings. Ready to explore home solar panels?

Understanding solar installation in Michigan starts with knowing your options and local benefits. Michigan electricity rates have. How much does solar cost in Michigan?

Take control of your energy costs with solar power. Average solar panel installation costs range from \$11,025 to \$31,500 in Michigan. How much you actually pay depends on the size of your system, what incentives you're eligible for and other factors.

Are solar panels worth it in Michigan?

Solar panels are worth it in most areas, including Michigan. Certain factors, including the cost of electricity, incentives, climate, and the angle at which the sun hits your roof impact how quickly you break even on your investment relative to other areas around the U.S.

How much does a 7kw Solar System cost in Michigan?

Given the average residential price-per-watt of \$4.14 in Michigan, a 7kW system can cost around \$28,951 depending on applicable rebates and other factors. Select your county by clicking on the map and see the potential generated solar power and panel pricing. See how it compares with the US state average.

Is solar a good investment in Michigan?

The energy rates are much higher in Michigan than in most other states — an average of 19.32 cents per kWh as opposed to the national average of 16.79 kWh — so solar will likely be a good investment for your home even if you use less power than most homeowners in your area. You can check your average consumption on your past energy bills.

How much money can you save using solar power in Michigan?

An average Michigan resident can expect to save a total of \$35,600 - \$48,300 on their electric bill in their first 20 years of using Michigan solar power. This

much money saved translates to 15% yearly ROI. This return on investment cannot be achieved even in the best stock market or ETF.

How much solar capacity does Michigan have?

As local solar companies grew, the solar capacity grew as well: in 200, the Michigan solar capacity was 6.5 times higher: 2.6 MW. From 2010 to 2015, the solar capacity grew to ~32.4MW and in the next five years to 290.7. Currently, Michigan has around 590 MW of total solar capacity installed.
