Overview

How a decentralized energy supply works in Mali?

The small size and dispersed locations of villages in Mali for a long time made off-grid decentralized mechanical and electric energy supply the only viable option. A multifunctional platform consists of a 10-hp diesel engine that, as desired, can power a mill, a generator, a pump or other devices mounted on the same rail.

How much energy does Mali use?

The remaining 4% of the primary energy supply is largely made up of renewably generated electricity, mainly by hydropower. On the energy consumption side, households consume 86 % of Mali's energy, (road) transport 10 %, industry (mainly mining) 3 % and agriculture 1 % (2003 figures). ►Go to Top.

What is the energy strategy of Mali?

The general energy strategy of Mali focuses on the development of local resources such as hydropower and solar energy in order to reduce petroleum imports. Objectives of the National Energy Policy regarding renewable energy are: Promotion of RE.

What is Malian energy policy?

Malian energy policy aims at contributing to a sustainable development of the country by making energy services available to as many as possible, thereby favouring (promotion of) social-economic activities. There are four specific objectives: Strengthen international cooperation regarding the energy sector.

Is there wind energy potential in the Sahelian & Saharan zones?

Significant wind energy potential is available, though hardly used, particularly in the Sahelian and Saharan zones, where annual average wind speed is estimated at 3 to 7m/s. Hydro
