

Design specifications for industrial energy storage tanks

Overview

What are the governing codes and standards for designing storage tanks?

An overview of the major governing codes and standards for designing storage tanks is provided, including API 620 and 650. Several parameters are taken into consideration when designing storage tanks, including process, safety, mechanical, civil, structural, and instrumental factors.

What is the design temperature of a storage tank?

For the purposes of this annex, the design temperature shall be the maximum design temperature as specified by the purchaser. Ambient temperature tanks (nonheated) shall have a design temperature of 100 °F. It is cautioned that exothermic reactions occurring inside unheated storage tanks can produce temperatures exceeding 100 °F.

What are the annex requirements for a storage tank?

1.2.17 Annex L covers requirements for the design of storage tanks subject to seismic load. 1.2.18 Annex M covers the extent of information to be provided in the manufacturer's report and presents a suggested format for a tank certification form. 1.2.19 Annex N covers installation practices for pressure- and vacuum-relieving devices.

What Annex covers stainless steel storage tanks?

S.1.1 This annex covers materials, design, fabrication, erection, and testing requirements for aboveground, welded, austenitic stainless steel storage tanks constructed of material grades 304, 304L, 316, 316L, 317, and 317L. This annex does not cover stainless steel clad plate or strip lined construction.

What are the different types of storage tanks?

There are three general types of storage tanks: atmospheric storage, pressurized storage, and low-temperature storage. Liquids, such as crude oil,

gasoline, and other products, as well as water, can be stored in atmospheric storage tanks. There are two types of atmospheric tanks: fixed roof and floating roof.

What are the design allowable stresses for Annex R tanks?

For Annex R tanks, design allowable stresses shall be per API 620, Section R.3.3, increased by 33 % for load combinations, including earthquake loads. The load combination in 5.4.2 f) is applicable. 18
