## Overview

---

Can energy storage and conversion technologies catalyze sustainable electrification in Africa?

The review aims to enlighten policies and investments that can promote the scalability of these energy storage and conversion technologies. If strategic efforts are implemented, these technologies could catalyze sustainable electrification and position Africa at the forefront of global energy innovation.

What is electrochemical energy conversion & storage (EECS)?

Implementing electrochemical energy conversion and storage (EECS) technologies such as lithium-ion batteries (LIBs) and ceramic fuel cells (CFCs) can facilitate the transition to a clean energy future. EECS offers superior efficiency, cost, safety, and environmental benefits compared to fossil fuels.

How can Africa improve its energy storage and distribution infrastructure?

Improving Africa's energy storage and distribution infrastructure. This could involve expanding or upgrading the grid infrastructure to make it more reliable, efficient, or adequate to meet the growing energy demand.

Are LIBs and CFCs a viable solution for Africa's energy transformation?

CFCs face technical obstacles, such as degradation and durability issues, which affect their performance and lifespan. These challenges highlight the need for a perspective review that analyzes the potential and feasibility of LIBs and CFCs for Africa's energy transformation.

Do diesel generators provide electricity in Africa?

Diesel generators are also widely used to supplement the intermittent grid supply or provide electricity in off-grid areas, accounting for 6 % of the total electricity generation in Africa [41, 143]. The regional distribution of Africa's energy mix is summarized in Fig. 6 c.
