

# Energy loss of air storage

## Overview

---

How do compressed air storage systems use energy?

The modeled compressed air storage systems use both electrical energy (to compress air and possibly to generate hydrogen) and heating energy provided by natural gas (only conventional CAES). We use three metrics to compare their energy use: heat rate, work ratio, and roundtrip exergy efficiency (storage efficiency).

What is the exergy loss of compressed air by throttling?

The exergy loss of compressed air by throttling is about 5%–8% in existing CAES systems . Although it is possible to increase the storage volume to reduce the operating pressure range, doing so results in low energy density and high construction costs.

What is compressed air energy storage (CAES)?

Storage technologies are being developed to tackle this challenge. Compressed air energy storage (CAES) is a relatively mature technology with currently more attractive economics compared to other bulk energy storage systems capable of delivering tens of megawatts over several hours, such as pumped hydroelectric [1–3].

What is a conventional compressed air energy storage system?

Schematic of a generic conventional compressed air energy storage (CAES) system. The prospects for the conventional CAES technology are poor in low-carbon grids [2,6–8]. Fossil fuel (typically natural gas) combustion is needed to provide heat to prevent freezing of the moisture present in the expanding air .

Can compressed air store electricity at scale?

One of the critiques of using compressed air to store electricity at scale is its low exergy density. Here, we define exergy density of the storage facility as

the ratio of the delivered exergy (i.e., expansion work) to the volume of the air storage cavern.

Who are the authors of thermodynamic analysis of a compressed air energy storage system?

Yufei Zhang, Erren Yao, Ruixiong Li, Hao Sun, Xin He, Huanran Wang, Huijuan Xu; Thermodynamic analysis of a typical compressed air energy storage system coupled with a fully automatic ejector under slip pressure conditions. J.
