

# **Energy storage battery budget plan**

## Overview

---

The policy targets the large-scale application of semi-solid-state batteries by 2027, with all-solid-state battery technology finalized, helping to achieve new-type energy storage installations exceeding 180 million kW and driving direct investment of approximately 250 billion yuan.

The policy targets the large-scale application of semi-solid-state batteries by 2027, with all-solid-state battery technology finalized, helping to achieve new-type energy storage installations exceeding 180 million kW and driving direct investment of approximately 250 billion yuan.

Announced by the National Development and Reform Commission (NDRC) and the National Energy Administration (NEA), the new plan is expected to drive CNY 250 billion (\$35.1 billion) in sector investment. From ESS News China aims to install more than 100 GW of new energy storage – primarily battery.

The policy aims to achieve large-scale application of semi-solid-state batteries and finalize the technology for all-solid-state batteries by 2027, helping to boost new-type ESS installations to over 180 million kW and drive direct investment of approximately 250 billion yuan. SMM September 17.

China, which already boasts the world's largest energy-storage capacity, is set to nearly double that level by 2027, with an anticipated investment of 250 billion yuan (US\$35 billion), according to Beijing's latest action plan. As outlined in the action plan, China's "new-energy storage system".

China plans to nearly double its new energy storage capacity to 180 GW by 2027, under a state-backed industry roadmap that foresees 250 billion yuan (US\$35 billion) of investment: Current capacity, dominated by lithium-ion batteries, stood at 95 GW as of June. China has consistently exceeded past.

China plans to have its battery storage capacity more than double to 180 gigawatts (GW) by 2027 in a new plan aimed at attracting \$35.1 billion (250 billion Chinese yuan), the authorities said on Friday. The massive deployment of the so-called new energy capacity—to differentiate from pumped-hydro.

Senate Republicans propose maintaining tax credits for battery storage projects through 2033 while phasing out EV tax credits and other clean energy incentives. Senate Finance Chair US Sen. Mike Crapo (R-ID) speaks to reporters at the US Capitol Building on June 9, 2025 in Washington, DC. Andrew.
