

Energy storage battery power characteristics

Overview

Most of the BESS systems are composed of securely sealed , which are electronically monitored and replaced once their performance falls below a given threshold. Batteries suffer from cycle ageing, or deterioration caused by charge-discharge cycles. This deterioration is generally higher at and higher . This aging cause a loss of performance (capacity or voltage decrease), overheating, and may eventually le.

In summary, the key characteristics of BESS are rated power capacity, energy capacity, storage duration, cycle life/lifetime, self-discharge, state of charge, and round-trip efficiency.
