

Energy storage car profit analysis code

Overview

How profitable is Bess for Energy Arbitrage grid applications?

In fact, as reported by the CAISO special report on battery storage , the largest positive revenue comes from day-ahead market energy schedules. For this reason, it is crucial to properly analyze the profitability of using BESS for energy arbitrage grid applications.

Will energy prices affect Bess revenue from energy arbitrage operations?

Therefore, we decided to use the current profile of energy prices due to the high price volatility present in the late summer (between 5500 and 65,000 h) and at the end of the year 2022 (after 8000 h), demonstrating in this way its impact on BESS revenue from energy arbitrage operations.

Are energy arbitrage profits overestimated?

However, it is worth noting that previous research on energy arbitrage profits from the PJM market [26, 27] suggests that the perfect foresight assumption may lead to overestimation of arbitrage revenue, but by a modest percentage (10-15 %) when compared to simpler strategies that rely on back casting of recent historical prices.
