

# **Energy storage new materials and application laboratory**

## Overview

---

What is energy storage laboratory?

Research and development in Energy Storage Laboratory focusses on both electrical and thermal energy storage materials and technologies. The electrical Energy Storage laboratory seeks to develop new technologies that can move beyond lithium-ion batteries, along with basic material research for improved energy storage and low cost.

What does a thermal energy storage laboratory do?

The laboratory is capable of determining the thermos-physical properties, such as phase transition temperature, thermal storage capacity, thermal conductivity etc., that are essential for designing a Thermal Energy Storage system (TES) for real-time energy storage application. How do Doe and National Laboratories protect energy infrastructure?

DOE and the national laboratories are working to protect energy infrastructure from potential supply shocks — whether from market fluctuations or national security threats. This requires safe and low-cost energy storage solutions that utilize domestic materials.

What is NYU Abu Dhabi Smart Materials Lab?

NYU Abu Dhabi Smart Materials Lab group photo. Welcome to the website of the Smart Materials Lab! Our vibrant research team at the Smart Materials Lab works at the interface of science and engineering to explore new materials for applications in the energy, water, and health sectors.

Are batteries the future of energy storage?

Batteries now support efforts to ensure low-cost, domestic energy production. At the U.S. Department of Energy's (DOE) Argonne National Laboratory, researchers are advancing breakthroughs at every stage in the energy

storage lifecycle.

How can energy storage improve energy production?

Innovations in energy storage — the capture of energy produced at one time for later use — can protect against supply chain disruptions, reinforce the grid and foster U.S. manufacturing competitiveness. Batteries now support efforts to ensure low-cost, domestic energy production.
