

Energy storage power cloud platform

Overview

What is a cloud energy storage integrated service platform?

The cloud energy storage integrated service platform is a cloud energy storage ecosystem built based on battery energy storage, combined with advanced technologies such as the Internet of Things, 5G, big data, cloud services and blockchain.

What is cloud energy storage?

Cloud energy storage (CES) in the power systems is a novel idea for the consumers to get rid of the expensive distributed energy storages (DESS) and to move to using a cloud service centre as a virtual capacity.

How a cloud energy storage platform works?

The physical transmission party controls the charging and discharging to realize the electric energy delivery. Finally, the platform settles the revenue of each party according to the traded electricity. The goal is to minimize the total system cost during the operation and dispatch of the cloud energy storage service provider.

How much electricity does a cloud energy storage device supply?

The energy storage device reported to the cloud energy storage platform from 6 p.m. to 7 p.m. can supply electricity. The electrical energy supplied by the energy storage device is shown in Table 2. This time, the distribution network's power demand is 675 kWh.

How can cloud energy storage help reduce energy costs?

Using the difference between peak and valley electricity prices can maximize economic benefits and reduce energy costs. The cloud energy storage service platform fully exploits the value of decentralized energy storage resources to participate in grid load regulation.

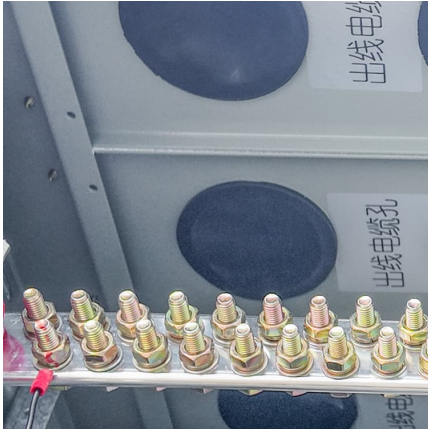

What is cloud energy storage (CES)?

Based on the combination of sharing economy and electric energy storage technology, Kang et al. proposed the concept of Cloud Energy Storage (CES) in 2017 .
