Why should you lease a site for a battery energy storage system?

Land is the most important resource for the development of battery energy storage systems. Several factors must be considered when considering the leasing of a site for a BESS project, some of the most important being: The size of the land required for a BESS project depends on the capacity of the battery system.

How do utilities encourage energy storage?

Utilities often offer incentives to encourage the adoption of energy storage systems to improve grid reliability and balance supply and demand. These incentives may include demand response programs, time-of-use rate structures, or capacity market participation.

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) are rapidly emerging as a critical component of the renewable energy landscape. As the demand for clean and reliable energy grows, BESS plays a crucial role in ensuring grid stability and optimizing energy utilization. Land requirements are a significant factor in the development of BESS projects.

What is the Investment Tax Credit (ITC) for energy storage?

The Investment Tax Credit (ITC), previously applicable to solar projects, has been expanded to include energy storage systems. The base ITC for energy storage is 6% of the project's qualifying costs. However, this can be increased to 30% if the project meets prevailing wage and apprenticeship requirements (PWA).

What is the ITC for energy storage?

The base ITC for energy storage is 6% of the project's qualifying costs. However, this can be increased to 30% if the project meets prevailing wage

and apprenticeship requirements (PWA). To further incentivize domestic production, the Domestic Content Bonus offers an additional 10% ITC for projects using American-made components.
