

# Energy storage power supply pd3

## Overview

---

What is USB PD3 & pd3.1 SPR?

In terms of nomenclature, USB PD3.0 is gradually being replaced by USB PD3.1 SPR (Standard Power Range). Products featuring PD fast charging with power up to 100W can be referred to as USB PD3.1 SPR devices, while those with power exceeding 100W fall under the USB PD3.1 EPR (Extended Power Range) category.

What is USB pd3.1 fast charging?

The chip industry surrounding the USB PD3.1 fast-charging standard continues to expand, laying a solid foundation for the future explosion in higher power markets. In May 2021, the USB-IF association officially released the USB PD3.1 fast charging standard, significantly increasing the maximum charging power to 240W.

What external components are required for a PD controller?

- Only external component required is an I2C EEPROM for storing configuration and FW Patch information. Typical Competitor PD Controllers do not integrate the Power Paths required in a USB Type-C PD System.

How many pd3.1 protocol chips does ismartware have?

As of October 2023, iSmartWare has introduced a total of eight PD3.1 protocol chips, while Southchip has released one. The following is an overview of these chips without any specific order. SW3560 is a protocol chip that integrates a 7A Buck controller.

What types of protocols does a PD3 chip support?

The chip supports various protocols, including PD3.1 SPR and EPR, SuperVOOC, SCP/FCP, QC5, PE2.0, and more. It provides exceptional performance and protection mechanisms, with a 5V to 36V input voltage range, CV/CC loop control, and integration of impedance compensation and

dual-path control.

What kind of power supply does a RISC-V chip have?

The chip comes with a high-voltage LDO and supports 3.3-24V power supply. Featuring 2 pairs of DP DM pins, it supports BC, QC, and other protocols, allowing for flexible expansion. The chip is equipped with a high-performance 32-bit RISC-V core, with a maximum clock frequency of 33MHz, 8KB SRAM, and 256KB FLASH.
