## Overview

The policy agenda calls for reliability-focused policy actions at the local, state and federal level, including supporting development of domestic supply chains, reforming interconnection, scaling energy storage technology, leveraging the benefits of distributed solar.

The policy agenda calls for reliability-focused policy actions at the local, state and federal level, including supporting development of domestic supply chains, reforming interconnection, scaling energy storage technology, leveraging the benefits of distributed solar.

Long-duration energy storage (LDES) will play an increasingly important role in decarbonizing the power sector as more variable renewable energy is added to the electric power grid. LDES is defined by the U.S. Department of Energy (DOE) as any system that can store energy for 10 or more hours. It.

The Solar Energy Industries Association (SEIA) has unveiled a new policy agenda calling for US grid reforms, domestic supply chain investment, and wider solar and storage deployment to meet surging US power demand. From pv magazine USA SEIA has a new policy agenda centered on electric reliability.

Advancing energy storage policies, programs, and regulations to accelerate an equitable clean energy transition. Tomorrow's clean and renewable electric grid will be built on a foundation of flexible, responsive energy storage technologies. Supporting the equitable scale-up of those technologies.

China has published a national plan to promote large-scale energy storage facilities, encouraging investment and broader participation in the electricity market. The 'Special action plan for large-scale construction of new energy storage (2025-2027)' was published last Friday (12 September).

— Today the Solar Energy Industries Association (SEIA) is unveiling a new policy agenda that details the critical actions that local, state, and federal leaders must take to strengthen the reliability of America's electric grid with solar and storage technologies. As the Trump Administration. What are the

different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaptation, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

What is a storage policy?

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings.

How do state and federal policies support storage?

Because storage is an emergent technology, state and federal policies also play a critical role in supporting its deployment across the United States. Some policies incentivize storage explicitly, while others alter the electricity generation landscape in ways that can enhance the incentives for storage developers.

How does energy storage support resource adequacy?

Energy storage can also support resource adequacy by counting toward a system's total installed capacity. Through capacity markets or other resource adequacy constructs, storage providers are compensated for their potential to provide energy in the future, particularly when the expectation is that demand will be high or supply low.

Does grid energy storage have a supply chain resilience?

This report provides an overview of the supply chain resilience associated with several grid energy storage technologies. It provides a map of each technology's supply chain, from the extraction of raw materials to the production of batteries or other storage systems, and discussion of each supply chain step.

Can market design & regulations improve energy storage?

Challenges will continue to emerge as more storage resources come online, and market design and regulations could play an important role in ensuring

that energy storage resources are appropriately incorporated without interfering with critical market functions. 5. Evidence on Storage Deployment in the US
