## Overview

---

What is electrochemical energy storage & conversion?

Our mission is to advance the scientific and technological understanding of electrochemical energy storage and conversion specifically in the context of a sustainable energy system, in which renewable energy is required to be stored in chemicals as e.g., hydrogen and (re-)converted into electricity.

Could iron be used for seasonal energy storage?

Researchers at ETH Zurich are using iron to store hydrogen safely and for long periods. In the future, this technology could be used for seasonal energy storage. What is ETH Zurich 'MEST'?

Celebrating the fifteen successful years of the MEST programme! The Master's degree programme in Energy Science and Technology (MEST) is offered by ETH Zurich to enable future engineers to rise to the challenge of developing future sustainable energy systems. The programme provides education in a large number of scientific disciplines.

How ETH Zurich supports the energy transition in Switzerland?

With its Energy Science Center, ETH Zurich is supporting the energy transition in Switzerland with specific solutions in the areas of research, teaching and knowledge transfer. Already published:.

Why should you choose ETH?

The programme provides education in a large number of scientific disciplines. Students individually structure their own study profile by selecting from a wide range of courses across many of the ETH departments.

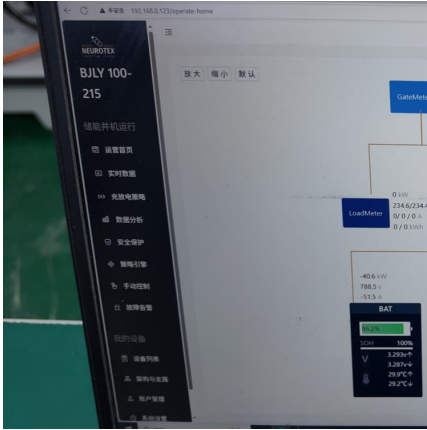

What is the Electrochemistry Group at ETH?

The Electrochemistry Group at ETH was created in 2011 in collaboration with Electrochemistry Laboratory at Paul Scherrer Institute.
