

# Expected ROI of on grid solar storage project in Guernsey 2030

## Overview

---

What is the energy strategy for Guernsey?

The Electricity Strategy for Guernsey covers the period up to 2050. The Committee for the Environment & Infrastructure considered several different ways in which Guernsey could meet its future demand including solar, wind, tidal, additional interconnectors, energy storage and alternative fuels.

What are the energy storage needs in 2030?

Key critical energy shifting services. The total energy storage needs are indicated by the red dotted line and are at least 187 GW in 2030, this includes new and existing storage installations (where existing installations in Europe are approximated to be 60 GW including 57 GW PHS and 3.8 GW batteries according to IE Energy Storage 2021 report).

Does Guernsey need a green economy?

It is essential that Guernsey can manage its own transition to a green economy effectively and so a strategic direction must be set, along with a market structure that supports this, and provide certainty to the energy industry. The Electricity Strategy was approved by the States of Deliberation in September 2023. What was proposed?

.

Where should an offshore wind array be located in Guernsey?

Feasibility studies to date have shown that the most optimal location for an offshore wind array in Guernsey's territorial waters is the west coast. The offshore wind feasibility report completed in 2016 is available in the downloads section of this page, along with a summary document.

What is a storage solution for maximising existing grid infrastructure?

regularly addressed based on real data. Storage solutions for maximising existing

grid infrastructure provide a solution which allows large-scale integration of solar and wind power without grid congestion or redispatch, avoiding any immediate need for large grid infrastructure investments and thus reducing costs, notin.

How much flexibility will gas turbines need by 2030?

y need will be even greater by 2030. Figure 10 adapted from this study shows that 76% of installed flexibility provision comes from gas turbines (open-cycle gas turbines, OCGT and closed cycle gas turbines (CCGT) without carbon capture utilisation and storage (CCUS) and only two storage technologies (PHS and batt

## Expected ROI of on grid solar storage project in Guernsey 2030
