

# Expected ROI of utility scale ESS project in Croatia 2030

## Overview

---

What are the costs and benefits of ESS projects?

Costs and benefits of ESS projects are analyzed for different types of ownerships. We summarize market policies for ESS participating in different wholesale markets. Energy storage systems (ESS) are increasingly deployed in both transmission and distribution grids for various benefits, especially for improving renewable energy penetration.

What are ESS grid applications?

At the same time, it is also important to classify grid applications of ESS by their working principles for gaining benefits. From the perspective of power systems, ESS contribute three types of resources: power regulation, energy storage and release, and capacity resource.

Will Croatia reduce emissions to a level set for non-ETS sectors?

The NU1 scenario shows a trend of continuously decreasing emissions, so that in 2030, the emissions are 33.5% lower than the emissions in 1990, and in 2050, they are 56.8% lower than the emissions in 1990. With this scenario, Croatia largely fulfils the obligation to reduce emissions to the level set for non-ETS sectors for 2030.

How to increase the share of res in transport by 2030?

Increasing the share of RES in transport by 2030 through the development of the advanced fuels market and achieving the planned share of advanced fuels in direct energy consumption in transport through the criteria of the lowest cost and the largest multiplier.

How can ESS improve the performance and profitability of electric grid applications?

To improve the performance and profitability of ESS for electric grid applications, future research should have a focus on developing decision-

making tools for determining the storage technology, installed capacity, and operating strategy.

How much ENTSO-E transmission losses are there in Croatia?

The current levels (2018) of losses in the transmission network of the Republic of Croatia amount to about 2% of the transmitted electricity, which is the amount at the level of other ENTSO-E transmission system operators.
