

# Flywheel energy storage generator set

## Overview

---

In 2010, Beacon Power began testing of their Smart Energy 25 (Gen 4) flywheel energy storage system at a wind farm in Tehachapi, California. The system was part of a wind power and flywheel demonstration project being carried out for the California Energy Commission. Overview Flywheel energy storage (FES) works by accelerating a rotor ( ) to a very high speed and maintaining the energy in the system as . When energy is extracted from the system, the flywheel's rotatio.

A typical system consists of a flywheel supported by connected to a . The flywheel and sometimes motor-generator may be enclosed in a to reduce friction an.
