## Overview

---

What is a natural gas pipeline control station?

As natural gas pipeline control stations are strategically placed in remote areas that often lack a reliable and consistent power supply, resulting in power generation through conventional fossil fuels or the internal use of natural gas.

Can a hybrid power system monitor a natural gas pipeline control station?

This paper presents an Internet of Things (IoT)-based, open-source SCADA architecture designed to monitor a Hybrid Power System (HPS) at a remote natural gas pipeline control station, addressing the limitations of existing proprietary and non-configurable SCADA architectures.

Where are high-pressure natural gas pipeline control stations located?

8. Conclusions High-pressure natural gas pipeline control stations are strategically located in remote, challenging terrains and increasingly rely on traditional and renewable energy sources, such as solar PV systems and wind turbines, due to unreliable power supply for smooth operations.

What are the different types of underground natural gas storage facilities?

We distinguish between two types of underground natural gas storage facilities: porous rock storage facilities are natural reservoirs in porous rock in which the natural gas can be stored in very large quantities, similar to a stable sponge.

How does a gas storage facility work?

The gas arrives at the storage facility with the pressure of the transmission system. In order to be able to inject as much gas as possible and withdraw it at the highest possible rates, the pressure of the gas is increased with the help of a mechanical compressor when it is injected into the underground storage facility.

Can a SCADA system improve a natural gas pipeline control station?

This research addresses the need for a low-power, cost-effective, and open-source SCADA system to enhance the efficient operation of remotely located natural gas pipeline control stations. The proposed solution utilizes an IoT-based SCADA architecture, the latest evolution in SCADA systems.
