

Government procurement price of microgrid storage in Spain

Overview

How much grid-scale storage will Spain have in 2025?

As of early 2025, Spain has roughly 1 GWh of grid-scale storage under construction, according to industry sources. This new wave of funding could accelerate the build-out, enabling developers, integrators, and OEMs to expand their footprint in one of Europe's most promising emerging markets.

Does Spain need more grid-scale storage?

Unlike some of its European counterparts—such as Germany, France, and Italy—Spain has historically lagged in rolling out grid-scale storage. However, recent events, including a regional blackout on the Iberian Peninsula, have served as stark reminders of the need for greater grid flexibility and resilience.

Does the capacity market guarantee the profitability of storage projects?

The capacity market is a mechanism designed to ensure the security of electricity supply, complementing revenues from generation, storage, and demand response. However, it should not be considered a tool to guarantee the profitability of storage projects.
