

# **Indian construction hydrogen energy storage**

## Overview

---

What is underground hydrogen storage potential in India?

Underground hydrogen storage potential in India India has vast and diverse geographical and geological systems having a variety of lithology spanning the geological time scale, from Archaean to Phanerozoic eon, which can be utilized in the production and storage of green hydrogen.

What are some green hydrogen projects in India?

Project: IOCL has started work on India's first green hydrogen plant at its Mathura refinery, with an investment of ₹2,000 crore. The plant will use solar and wind energy to generate hydrogen. 4. NTPC Limited Project: NTPC is piloting a green hydrogen mobility project in Ladakh, where it will set up hydrogen-powered vehicles and fuel stations.

Will India become a leading powerhouse in green hydrogen production?

A bus that runs on green hydrogen sits at a hydrogen plant at Oil India Limited in Jorhat, India, Thursday, Aug. 17, 2023. India aims to become a leading powerhouse in green hydrogen production by the next decade as part of a broader industrial strategy to achieve a \$5 trillion GDP economy by 2028.

How can India achieve a strong hydrogen economy?

Together, these aspects form a holistic approach toward establishing a robust hydrogen economy in India, a country strategically located with abundant renewable energy resources, primarily from solar and wind power. NHM aims to produce a minimum of 5 MMT of green hydrogen each year by the year 2030.

What is the status of India's burgeoning green hydrogen economy?

current status of India's burgeoning green hydrogen economy. Information included in this report is current as of October 2023 t developments that occurred after that time.Executive summaryGreen hydrogen can enable

energy transition as India takes its net-zero.

What is India's Green Hydrogen mission?

Under the Green Hydrogen Mission, India has ambitious plans to significantly increase domestic electrolyser production capacity, with a target of 60–100 GW by 2030. Availability of land banks across different energy rich states for setting up green hydrogen plants unlike countries such as Japan and South Korea which face land scarcity.
