

# Lithium iron phosphate battery supplier quotation in Vietnam 2030

## Overview

---

Which companies manufacture lithium batteries in Vietnam?

Korean electronics giants Samsung and LG also conduct lithium battery manufacturing in Vietnam. Samsung Electronics runs smartphone and appliance factories in Vietnam, and more than half of Samsung smartphones are made in Vietnam.

Why did the cost of lithium-ion batteries drop in 2023?

The cost of lithium-ion batteries decreased and reached a historic low of USD 139 per kilowatt-hour (kWh) in 2023. This was attributed to the fall in raw material and component prices, facilitated by an increase in production capacity across various segments of the battery value chain.

Who recycles lithium ion batteries?

Just last October, Li-Cycle, the largest lithium-ion battery recycler in North America, and VinES launched their global recycling partnership, under which the two sides are exploring global recycling solutions for VinES and VinFast.

What is a lithium battery?

A lithium battery is a device that converts its own stored chemical energy into electrical energy.

Where do lithium ions come from?

In January 2023, the US Geological Survey (USGS) estimated that of the 86 million tonnes of lithium identified worldwide, 21 million tonnes are native to Bolivia, 19.3 million tonnes to Argentina, and 9.6 million tonnes to Chile. Countries like Vietnam are heavily dependent on imports of lithium ions for battery manufacturing.

What are the different types of lithium batteries?

Lithium batteries can generally be divided into three categories - consumer batteries, power batteries, and energy storage batteries, which are mostly used in 3C products (computer, communication and consumer electronic products) electric vehicles, and other fields.
