Energy Logistics is a company that provides warehouse services such as space, equipment, systems, and quality labor all focused on helping you achieve your goals. They have developed strong relationships in Iraq and internationally with their business partners.

How can a logistics vehicle reduce the energy consumption?

The shortfall can be supplemented using the electricity stored in the energy storage devices of other logistics vehicles. In the designed vehicle, the

refrigeration compressor is powered by solar energy and stored battery power rather than diesel; thus, the diesel consumption of the vehicle is reduced. 4.2. Cooling Load Estimation 4.2.1.

Are solar-powered refrigerated logistics vehicles a viable alternative?

Solar-powered refrigerated logistics vehicles are gradually becoming a viable alternative to traditional diesel refrigerated trucks. For example, Sono Motors developed a solar-powered refrigerated vehicle that can generate at least 50% of its energy requirements; this vehicle reduces operating costs and has high efficiency.

Does a refrigerated logistics vehicle use diesel?

In the designed vehicle, the refrigeration compressor is powered by solar energy and stored battery power rather than diesel; thus, the diesel consumption of the vehicle is reduced. 4.2. Cooling Load Estimation 4.2.1. Assumptions and Conditions In this study, the following assumptions were made for the refrigerated logistics vehicle: 4.2.2.

How much CO₂ does a delivery logistics vehicle produce?

Therefore, for an operation period of 12 h, the total carbon and CO₂ emissions generated by a delivery logistics vehicle with an electric compressor would be approximately 8.6~12.9 and 31.6~47.3 kg lower, respectively, than those generated by a traditional logistics vehicle with a diesel generator.
