

Lone wolf battery

Overview

Are Luna Wolf V2 ebike batteries reliable?

This is my secone Luna Wolf V2 ebike battery. This battery is very reliable. Having now 2 DIY ebikes, I no longer have to share my first Luna Wolf between them.

How do you remove a wolf battery from a bike?

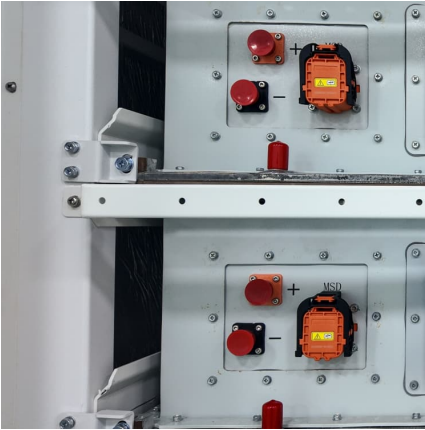

You simply attach the magnetic plate to your water bottle holes in your frame and the Wolf snaps in place. The pack is easily removable by just pushing sideways on the top of the pack. The magnets are very strong, in fact you can pick up most bikes by just the hold of the magnets. The only easy way to get the battery off is by tilting it sideways.

Is the Luna battery a good battery?

i do not often write reviews but this Luna battery is exceptional. i have had many other batteries including 4 other 52 volt batteries i bought for other bikes i have had on bbshd and hub bikes. the fact that i bought this battery to have as a spare says it all.
