**Abstract:**The optimal configuration of the rated capacity, rated power and daily output power is an important prerequisite for energy storage systems to participate in peak regulation on the grid side. Economic benefits are the main reason driving investment in energy storage systems. In this paper.

**Introduction** In order to adapt to the demand of the original thermal power units for new energy power consumption, improving its peak regulating capacity is one of the key factors. The heat storage system is an important way of "thermoelectric decoupling" of coal-fired thermal power units, so it.

Firstly, this paper starts from the energy storage technology development, and introduces the domestic and foreign research status of energy storage participating in the auxiliary service market of power peak regulation and frequency modulation. Secondly, a comprehensive review is conducted on the. What is the peak regulating effect of energy storage after parameter optimization?

According to the generator output curve and energy storage output curve, the peak regulating effect of energy storage after parameter optimization is better than that without parameter optimization.

What is the optimal energy storage allocation model in a thermal power plant?

On this basis, an optimal energy storage allocation model in a thermal power plant is proposed, which aims to maximize the total economic profits obtained

from peak regulation and renewable energy utilization in the system simultaneously, while considering the operational constraints of energy storage and generation units.

What are the parameters of energy storage device?

The parameters of the energy storage device are set as follows:  $P_{INIT} = 0$ ,  $T_A = T_B = T_C = T_{D'} = 0.5$  s, power control gain  $K_{\Delta P} = 1$ , speed control gain  $K_{\Delta \omega} = 1$ .

Why is energy storage important in power system?

Energy storage is an important flexible adjustment resource in the power system. Because of its bidirectional flow of energy, it is very suitable to be used in power system as a peak regulation method.

Do I need to charge the energy storage system for peak shaving?

The dispatching department calls it for free. When the output of thermal power unit is between  $(1 - k) P_{the}$  and  $0.5 P_{the}$ , the thermal power unit has the ability for peak shaving. At this time, there is no need to charge the energy storage system for peak shaving. To avoid deep discharge in energy storage system,  $SOC_{min}$  is set to 20%.

Can energy storage provide peak regulation service in smart grid?

Optimal Deployment of Energy Storage for Providing Peak Regulation Service in Smart Grid with Renewable Energy Sources. In: Xue, Y., Zheng, Y., Rahman, S. (eds) Proceedings of PURPLE MOUNTAIN FORUM 2019-International Forum on Smart Grid Protection and Control. PMF PMF 2019 2021. Lecture Notes in Electrical Engineering, vol 584.
