Hydrogen fuel cells, renowned for their high efficiency and zero-emission operation, are increasingly used in automotive and stationary power applications, while methanol fuel cells, with their easy fuel storage and portability, serve as practical solutions for mobile and small-scale applications.

Develop stationary direct methanol fuel cells (DMFCs) using pure methanol as the fuel. The DMFC prototype will produce peak power density of  $\geq 300$  mW/cm<sup>2</sup> with total loading of  $\leq 3$  mgPGM/cm<sup>2</sup>. 1. Cathode PGM-free Catalyst; 2. Anode Catalyst with Ultralow Loading PtRu on VACNFs Support; 3. Electrode.

Methanol energy storage technologies encompass various methods and mechanisms to store energy in the form of methanol, providing effective solutions for renewable energy integration and facilitating the transition towards a sustainable future. 1. These technologies include direct methanol fuel.
